

Agile Project Management (AgilePM®)

Foundation to Practitioner

Overview

AgilePM® provides the ability to deliver Agile projects in organisations requiring standards, rigour and visibility around Project Management, whilst at the same time enabling the fast pace of change and empowerment that is integral to Agile.

AgilePM addresses the needs of management, project managers, team leaders, business analysts and the PMO working in an Agile environment, based on the DSDM® (Dynamic System Development Method) Agile Project Framework.

The Foundation course lays a solid foundation for managing projects using the DSDM Agile Project Framework and prepares candidates for the AgilePM Foundation certification.

The Practitioner course builds on the AgilePM Foundation course, providing additional depth of understanding, and prepares candidates for the AgilePM Practitioner certification exam.

Key topics

The courses explore the following content with the Foundation level focusing on the theory, whilst Practitioner considers the application of the method:

Agile approach and philosophy

The Agile mindset. Being Agile vs Doing Agile. Delivering solutions using an Agile approach. Which Agile approach should you use.

The DSDM Agile Project Framework

The DSDM approach, principles and processes, and how they are applied throughout the project. Application and tailoring of relevant AgilePM aspects in context to enhance project success.

Working with DSDM Roles and products

Roles and responsibilities. Working effectively as an Agile team. Collaborating and communicating for success. The project manager's role across the DSDM lifecycle.

Managing Agile projects using DSDM

DSDM planning concepts including outcome-based planning and iterative development. Defining requirements through user stories, prioritisation and estimation. Tracking and control concepts and techniques e.g. management by exception, timeboxing and stand-ups. Managing quality and risk.
